WHEN FINISHING A BASEMENT, MAKE SURE IT’S REALLY FINISHED.

How many DRICORE® panels and leveling kits do I need?
Use this simple formula to estimate the number of panels required for your project.

\[
\text{Room square footage} \div 3.3 = \text{Number of panels required}
\]

Typically one leveling kit is used for every 60 panels.

Concrete continually releases moisture and if trapped this can lead to mold. DRICORE® is the first and most important step towards creating a new living space as warm and comfortable as any other space in your home. DRICORE® is the one-step engineered subfloor solution that is specifically designed for concrete. The raised moisture barrier allows for air flow, provides warmth and protects your finished floors.

DRICORE® Subfloor panels have been designed with air gap technology to keep basement floors dry, warm and comfortable throughout the entire year. The air gap encourages constant air flow and evaporation/reabsorption of surface moisture emitted from your basement concrete floor.

**WHY YOU NEED DRICORE® SUBFLOOR**

DRICORE® is ideal under carpet, laminate, engineered hardwood, stone, tile and vinyl.

**HOW THE DRICORE® SUBFLOOR TECHNOLOGY WORKS**

Air gap technology promotes air flow to control moisture
Provides warmer floors
Saves on heating bills
Can be used on any finished flooring
Tongue and groove design provides fast and easy installation
Strong enough to stand up to heavy furniture
Cushions finished floors

- Subfloor R+ is only available online at select retailers
- Check with manufacturer for below grade installation of hardwood

**PRODUCT COMPARISON**

**DRICORE® LEVELING KITS**

The leveling shims have been designed to slide under DRICORE® panels, to adjust for uneven areas on your concrete floor that are less than ¼".
